CUSTOMER TESTIMONIAL

AAZ Laboratories

Healthcare sector

AAZ
Votre santé sous contrôle

zeendoc
YOUR KIND OF DIGITAL

A French, family-owned, and innovative SME, manufacturer and distributor of in vitro diagnostic medical devices and winner of the international Galien Prize for pharmaceutical research in 2018 with its HIV self-test, AAZ Laboratories innovated again in 2021 with the launch of the COVID-VIRO self-test, enabling everyone to take charge of their health and test themselves at home.

Testimonial from Ms Candice Coulloc'h, VP / Strategy, Orientation, and Innovation.

The Needs

In early 2020, Ms Coulloc'h wished to **step up the digitalisation of her company** in order to achieve greater efficiency. Zeendoc offered this **document digitisation** service to make recording, filing, searching, and archiving documents easier.

"I was particularly keen to make this a 100% French partnership with Zeendoc in order to showcase French expertise, a value our two companies have in common."

The Implementation

To meet AAZ's needs, we implemented, with **our Zeendoc document management solution**, a system for archiving the company's paper and digital documents in a single document repository, and established validation workflows between the various stakeholders.

Interfaces between the accounting and order management software have been set up in order to **automate data entry and processes.**

"The support and responsiveness of the after-sales service are greatly appreciated!"

Zeendoc is an innovative solution that saves time and reduces paper storage.

+2,000
supplier invoices

The Results

People from different departments (management, accounting, sales, marketing, and sales and purchasing administration) use Zeendoc. With the successive lockdowns of the last two years, adoption of the Zeendoc document management solution has accelerated. The tool saves them time every day when searching for and recording documents (invoices and expense reports), and saves the company storage space.

• **Improved supplier invoice management:**

More than 2,000 supplier invoices are received annually by our customer. Zeendoc has simplified their entry. They are now **automatically recognised and indexed** within Zeendoc, which saves time and avoids having to key them into their accounting software.

Searching for an invoice is very quick and avoids archiving paper. Even the accountant has their own access to the platform and can search for invoices remotely, which represents **a saving of time and money** for the company.

• **Simplified expense report management:**

In just a few clicks, employees photograph their expense receipts and drop them into their Zeendoc cabinet, which will **automatically recognise the essential data** (dates, supplier, amounts, etc.). Expense reports are recorded in the accounts and assigned to the relevant approvers.

A simple check and switch is all it takes to integrate them into the accounting software. **A considerable time saving** for all operations (entry, filing, processing, transmission, etc.).

• **Digitisation of payslips:**

Sending and archiving payslips is now simpler, **faster, and more secure**. The digitisation of payslips has delivered **productivity gains** through optimised processing, automated distribution of payslips to employees, and simplified archiving.

Employees have **secure access** to their payslips in their **secure personal space** and an archived copy in their **personal digital safe** for a period of 50 years.

Zeendoc has saved time and storage space, but is also part of a new digitalisation approach for the company.
